PREFACE

In the dynamic arena of the modern security paradigm, where the combination of technology and identity verification is at the centre of attention, we are proud to reveal a comprehensive adventure contained in the page "Non-Cooperative Multimodal Biometrics: Issues and Solutions". This book organises an in-depth expedition into the complicated domain of periocular analysis, especially in the context of low-resolution iris recognition. In doing so, it offers invaluable insight into both the challenges and promising prospects of using periocular cues to achieve accurate biometric recognition. This book is supported by grant RDU180378 - Develop A New Multimodal Biometric Authentication Algorithm for Mobile Security.

Beyond its focus on periocular intricacies, this book aspires to present a panoramic view of non-cooperative multimodal biometric authentication. Serving as a nexus between scholarly insights and pragmatic implementation, it serves as an enlightening guidepost for researchers, students, and professionals navigating the labyrinthine paths of biometric security.

As we move through the following chapters, our aspiration is that readers will gain a deep understanding of the fundamental challenges that underlie the biometric landscape, along with smart solutions that pave the way forward. This effort seeks to bridge the cognitive gap, making the technical dimensions of biometric solutions accessible to a wider spectrum of enthusiasts, interested in leveraging their effectiveness. We expect this book to spark dialogue, ignite further inquiry, and contribute meaningfully to the relentless

evolution of biometric security in our increasingly complex global landscape.

ACKNOWLEDGEMENT

In the pages of "Non-cooperative Multimodal Biometrics: Issues and Solutions," the culmination of our collective efforts underscores the power of collaboration and shared vision. This book stands as a testament to the potential that arises when minds come together to unravel complex challenges.

Thanks to our advisor, mentor and colleague, Dr Muhamad Razib Othman, who guided our intellectual journey and pushed us to go beyond the boundaries of our knowledge. Creating this book involved a dynamic interplay of ideas, and we appreciate your expert in the field, enriching our discussions and collaborative efforts.

We are grateful to the publishers, UMPSA Press, for believing in our efforts and providing a platform to share our views with a wider audience. Your support is invaluable in making this book a success.

Behind the scenes, our family and loved ones provide unwavering support. Your patience, encouragement and understanding during the writing sessions have been our constant motivation.

In this book, we aim to outline the challenges of non-cooperative multimodal biometrics and propose solutions that shape the future of identity recognition. As readers engage, we hope to inspire conversation, new perspectives and new discoveries.

"Non-Cooperative Multimodal Biometrics: Issues and Solutions" covers a shared journey of discovery, resilience and collective aspiration. To all who contributed, whether through conversation, criticism or silent encouragement, our deepest appreciation.

With gratitude and hope,
Anis Farihan Mat Raffei
Hishammudin Asmuni @ Hasmuni
Rohayanti Hassan

TABLE OF CONTENT

Preface	v	
Acknowledgement	vii	
Table of Content	ix	
List of Tables	x	
List of Figures	xvii	
Chapter 1	Non-cooperative Multimodal Biometric	1
Chapter 2	Image Processing in Multimodal Biometric	9
Chapter 3	Non-cooperative Multimodal Biometrics Procedures	45
Chapter 4	Iso-contrast Limited Adaptive Histogram Equalisation for Iris Contrast Enhancement	65
Chapter 5	Gradients Fuzzy Logic and Morphological Processing for Eyeglass Frame Detection in Iris	97
Chapter 6	Rotation Invariant Uniform Local Binary Pattern and Colour Moment for Periocular Features Extraction	137
Chapter 7	Future Non-cooperative Multimodal Biometric	177
References	185	
Authors' Biography	197	
Index	199
